

Sonic Beyond the Horizon

- Sonic Speed Update -

Keybind Updates

- Z -> R
- G -> F
- X = X
- C -> V
- V -> C
- Scroll -> Middle Mouse Button
- ` -> Left Alt
- U -> H

Mechanic Updates

- You now switch to the Melee slot with Mouse 4 and Ranged with Mouse 5. Pressing them again goes back to the combo slot. So now there's only 4 Slots you can scroll to, and these slots are only accessed by pressing their respective keybind; and using a move from these slots, unless it's a holdable move like Sonic Boom or Cross Slash, brings you back to the combo slot

1. Boost
2. Combo
3. Ultimate
4. Transformation

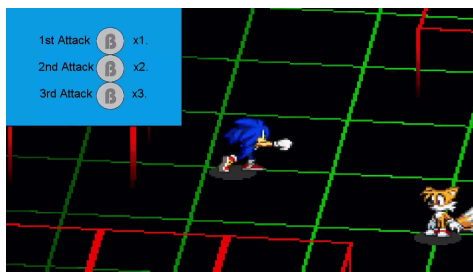

- Dash is now a universal ability with G (We had 'B' programmed in and just never used it, I'd like to use the unused keybind for this, but changed to G), which behaves like air boost but has a boost aura, so it does damage and knockback (Doesn't curl into a ball). Different animation/model if dashing at a downward angle.

- Parry is changed to block after holding the button for more than half a second
- You can now also dodge backwards (Shift + S x2)
- The double jump behaves more like a dash, too, when sprinting: it shoots you in the direction you're looking, just like the dash. When not sprinting, it's the normal double jump. If you try to jump after a double jump, the insta-shield triggers for a half second.
- If boost is disabled (Level 0), you have to build up speed to reach your max base speed. This momentum system goes for the boosts too, in that you can go faster (1.5x) than your boosted speed if you keep sprinting (Constant sprinting for 7 seconds. Another sonic boom triggers when this is achieved). If your sprint stops for more than 3 seconds (5 if in the air), you revert back to your normal speed (Normal speed for whatever boost level you're on). Max Speed while on Boost 3 triggers the Peelout animation (still the regular Boost Level 3 particle trail). Only while on Boost 3 can you continuously go faster, with the speed gradually increasing to the max the game allows. These extra increases occur while maintaining your max speed every 10 seconds. You can reset this by holding shift, bringing you back to standard boost 3 speed. (Plays Sonic stopping sfx)

- If you die with the 7 chaos emeralds on your person, you get saved totem of undying style and auto-transform into Super Sonic
- Your enemy chain score will now only go up every 2 attacks instead of one, and doesn't finalize until after a second and a half of you hitting the floor
- Punching while you and the target are both in the air triggers the air combo effect

- Standard punches no longer have jumping or shifting finishers, leaving the basic 3-hit combo with the fourth dealing a bit more damage and some light knockback.
- Updated wall running to allow for running on all surfaces, including upside down and freely to the left or right or down on a wall. Wall running should only happen when running into a wall that is taller than the auto step reacts too. If needed a wall running button can be added.
- Improve auto step up and down to be smoother and to not disrupt momentum
- Animation and effects can hopefully be updated

Ability Updates

Boost (Slot 1):

Additions

- Boost Aura is now an ability; when enabled, it does what you think, giving you a damaging aura when you run with Boost on. Does damage (Same as homing attack) and pushes enemies out of the way a bit. Slightly increases speed

Changes

- Power Boost can now be exponentially charged. It starts normally, but repeatedly pressing it slows everything down and speeds you up more and more, offering full customization with infinite speed potential (One press, 75% tick speed, 25% speed increase, two press, 50% tick speed, 50% speed increase, three press, 25% tick speed, 75% speed increase, four presses, lowest possible tick speed that's not 0, 100% speed increase), shift + Power Boost keybind resets turns it off. No longer lifts you in the air when activated.
 - Boost level increases all damage by 10, so Homing attack, Spindash, Spin Slash, Speed Blitz, Sonic Boom, etc, and it goes- homing attack for example, Boost 0 - 15dmg, 1 - 25dmg, 2 - 35dmg, 3 - 45dmg
-

Combo (Slot 2):

Additions

- Holding the spin attack now does... the spin attack, where you curl into a ball. And that's it, you can move around in ball form and everything like you normally would, passing through enemies damages them, of course. (Make sure jumping in ball form doesn't trigger the dash if you were in ball form BEFORE jumping)
- Doing the spindash requirements, but looking up instead of down charges, charges Peelout, which does the same thing as spindash, but you go faster, bringing you to max speed for your boost level instantly, but doesn't deal any damage, obviously

Smash attack

has new shift variants. Pressing and holding Shift + V does a punch barrage, and doing so in the air does a kick barrage. Ends after 3 seconds or when let go, dealing knockback at the end of its use.

- Stomp is now the air variant of Updraft, pressing F kicks into the air, dealing damage and inflicting 1.5 seconds of stun, and puts them in an air combo state. Using this move while shifting does the alt move, Sonic Eagle, kicking to the ground, dealing damage, and one second of stun.
- If you use stomp while in ball form and hold jump, it turns into bounce, bouncing you back up 10, then 20, then 30 blocks.

Changes

- Spindashing in the air makes you hover and then launches you in the direction you're looking. Spin-dashing also now knocks people away in the direction you're facing instead of just going through them. You can only spin dash in the air once unless you hit an enemy, then you get another one; otherwise, you have to land on another block to reset it.
- Charging Spindash no longer drags you to a complete stop, but instead slows you down slightly. Charging Spindash now only increases its strength. Its duration and speed are always at their maximum regardless of its charge
- Stomping while holding Left Click and using the Spindash now breaks blocks beneath you.
- Humming top now moves as fast as running at your current speed level, unless you're hitting an enemy, then it slows only as much as it needs to keep the enemy juggled
- Humming top's dmg increased to however much damage your punches currently do
- Remove the cooldown for the shift variant of Speed Blitz
- Speed Blitz now always puts you 7 blocks from the hit target, still facing them
- Speed Blitz damage increased to 8
- Remove the cooldown for the homing attack
- Fully Charged Smash Attack with power boost does a lightning burst particle effect and doesn't slow you down whilst charging
- Smash Attack no longer slows you while charging

- Smash Attack and the regular variant of speed blitz can now be used at the same time
 - .
-

Melee Attacks:

Changes

- Loop Kick is now the Shift Variant for Wild Rush

- Change the particle animation for the tornado to look more like this (Like a column instead of an hourglass)
- Grandslam has now moved to this slot, so using parry will bring you here, now being the F move on this slot. (Parry is no longer a needed prerequisite to use this move)

- Replace Cyclone Kick with Windmill Kick, a holdable multi-hit move that stuns those caught in it, launching them away when the move has ended. This move will also deflect projectiles. Can be held for up to 3 seconds. This is now the default move, with Spin Slash as its shift variant.
- Remove ONLY the condition of speed mirage ending when Sonic leaves its radius

Additions

The C move on this slot will be Afterimage. Pressing this will make you completely invisible and undetectable by entities for 3 seconds, or until another ability is used, leaving behind a decoy standing where you activated the ability or attacking what you were attacking that will fade away after the duration (basic punches only). Pressing Shift + F initiates a counter for 2 seconds, or another move is used. If you are hit within this window, you teleport behind the attacker instantly, damage negated, leaving your fading image.

Ranged Attacks:

Additions

The F move on this slot will be Sonic Wave/Storm. Wave, being the grounded variant, spinning in place before releasing a cone-shaped wave of wind, sliding forward fast across the ground for a duration of 2 seconds before dissipating, pulling entities with it and dealing damage to them while active. Storm, being the air variant of it, travels downward in a diagonal path towards the floor for 3 seconds before dissipating, unless it hits the floor before it vanishes, extending its time by another 2 seconds as it travels along the floor.

Ultimate (Slot 3)

Changes

- Ultimate is now bound to R on slot 3, and is now balanced with a five-minute cooldown rather than being built up like Phantom Rush, no longer one and the same.

Additions

- Phantom Rush is now its own thing, which does what it does, how we have it, just without the around-the-world thing, that's now just for the ultimate
